Andorra

The Principality of Andorra is a European state in the heart of the Pyrenees, between France and Spain.

With 468 km² of mountainous terrain, altitudes range from 840 metres to 2,946 metres at its highest peak. The climate is dry and temperate. Water is abundant, with numerous lakes and rivers fed by plentiful springs and snow that gathers on the upper reaches of the mountains in winter. The vegetation is widespread and diverse, with extensive pinewoods and high alpine meadows. These conditions result in a patchwork of greenery and the typical rocks of this rugged mountain landscape.

There is evidence that men have lived in Andorra continuously since the Epipaleolithic period, some 12,000 years ago. Although today there is a permanent population of about 80,000, for many centuries and well into the twentieth century – when the country underwent a spectacular economic transformation, abandoning the exploitation of natural resources to specialise in services – the numbers remained constant between 5,000 and 6,000.

The capital of the Principality is Andorra la Vella. The official language is Catalan and its currency is the euro, although any currency may be used in financial transactions.

Institutional organization

Andorra's unique political system began in the 13th century, when two treaties were signed in 1278 and 1288, called pariatges, ending the rivalries that existed between the Bishop of Urgell and the Count of Foix for possession of Andorran territory. These treaties granted indivisible joint ownership to the two lords, which survived until the end of the 20th century, although the rights of the Count were handed down to the King of France and subsequently to the President of the French Republic.

In 1993, major change took place when the Andorran people adopted a written constitution that institutionalised the parliamentary co-principality and set out definitively the division of the three traditional powers: legislative power is exercised by the General Council (descended from the *Consell de la Terra*, created in 1419), a single-chamber parliament formed of 28 councillors, half elected by national vote and the other half in the seven territorial constituencies, the parishes; executive power is wielded by the Government, led by the Head of Government in collaboration with up to 12 ministers; judicial power is overseen by the High Council of Justice, with three jurisdictions (civil, administrative and criminal) and the possibility of appealing the

decisions of the courts of first instance - *Batllia* (magistrates) and *Corts* (Criminal Court) - before the court of second instance, the High Court of Justice.

The country is divided into seven parishes, each headed by a *Comú*, the organ of local government, which exercises political and administrative powers through its Council, led by a *Cònsol Major* (Head Councillor) and a *Cònsol menor* (Deputy Head Councillor). Other state institutions include: the Constitutional Court, which ensures that Constitutional laws are applied correctly; the *Raonador del Ciutadà* (Ombudsman); the Accounts Court; the Andorran National Institute of Finance, which is the financial authority, and the Andorran Data Protection Agency.

The economy and society

For many centuries, the country's economy was based on agriculture and livestock or other natural resources such as wood and iron. It was not until the first third of the 20th century, with road connections to neighbouring countries and the arrival of electricity, that Andorra began to open up to the outside world and the economy diversified. However, it would be another couple of decades before the change took hold, replacing the primary subsistence sector almost totally with the tertiary sector. Since then, Andorra's economic development has been based on services.

Specific assets, such as the snow – Andorra has the most important winter sports domain in the Pyrenees - the scenery, the cultural heritage (especially Romanesque architecture) and the tax advantages, have turned Andorra into a major tourist destination, with numbers of visitors varying between 8 and 10 million a year and quality hotel, shopping and leisure services. Other sectors, such as finance or construction, have also greatly contributed to national growth. Over time, economic agents grouped into sectorial organizations, such as the Association of Andorran Banks, and all are represented by the Chamber of Commerce, Industry and Services.

Only two fifths of the inhabitants of Andorra have Andorran nationality –most of the others are Spanish, Portuguese or French–. This is because Andorra needed large numbers of immigrants to maintain the high rate of economic growth. Health services are provided by professionals, a network of first aid centres and a modern hospital, and since 1968, there is a public social security system, which all employees are obliged to join. As for education, schooling is compulsory and free for children, who can choose from either the Andorran system or the Spanish or French systems, also present in Andorra.

The future

When the Constitution was passed, in 1993, this set down the political standards of a modern State, enabling Andorra to take her place alongside other modern countries and participate in international bodies such as the United Nations (1993) and the Council of Europe (1994). In parallel, since then, Andorra has tightened her socio-economic links to the European Union and above all, to her closest neighbours: Spain, France and Portugal, with whom she has signed special treaties.

The first step was taken in 1990, with the Customs Union Agreement, which included the Principality in the territory of the Community in relation to moving goods (except agricultural products). In 2004, she signed the cooperation agreement with the EU, which, without being a full member, provides for closer relations in a wide range of fields (environment, education, culture, health, transport, etc.). Since then, Andorra has started a process of legislative reforms aimed at adapting the country to EU standards with the objective of greater integration into the international economic, financial and social panorama.

In the fiscal field, when Andorra signed the Paris Declaration with France (10 March 2009), this enabled Andorra to follow a path of reforms which culminated in her removal from the list of tax havens and with the General Council passing the Law on the exchange of information on tax matters (September 2009). This text embodies international standards for financial transparency and cooperation against tax evasion and also establishes information exchanges between countries under strict rules of confidentiality.

Along these lines, Andorra, by cooperating with the OECD, has already signed more than twenty bilateral agreements on tax information exchange*. These are complemented by a tax reform policy (the introduction of a low taxation system), reform of the financial system and signing the Monetary Agreement (2011, through which Andorra will be able to mint Euros from 2013). The process of bringing the tax system into line with other OECD countries will enable Andorra to sign double taxation treaties, the first of which was with France, and she is now in negotiations with Spain, in parallel with an internal process of opening up the economy by relaxing the criteria for foreign investment.

* List to countries:

Austria, Liechtenstein, Monaco, San Marino, France, Holland, Portugal, Spain, Iceland, Finland, Faeroe Islands, Denmark, Norway, Sweden, Argentina, Greenland, Germany, Australia, Poland, Belgium, Czech Republic, Italy and South Korea (USA and Hungary soon)

Source: United Nations Development Programme: Human Development Report 2013.

* The Human Development Index (HDI), drawn up by the UNDP (UN Development Programme), tries to measure the level of well-being among the population by combining three types of variable: on the one hand, income (valued at purchase power parity), to which are added aspects relating to health conditions (reflected in life expectancy) and access to education. This combination of factors is synthesized in the HDI, in which the highest levels (above 0.79) are associated with very high living standards, while the lowest (0.52 – 0.28) relate to countries with low levels of well-being.
